## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-10 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brady et al. (6249227).

Regarding Claims 1,2,5-10 and 20, Brady et al. show in Figure 4F, for example, an apparatus 400, 422 comprising an RFID circuit (IC) 424, an interconnect system 444 and 446 connected to the IC 424 such that one or more (antenna) devices 448 can be operatively attached to the interconnect system whenever the orientation of the RFID IC is in any of a plurality of positions with respect to the one or more devices, all arranged as claimed. Although Brady does not specifically show the RFID IC 424 in various positions, it would have been obvious to the skilled artisan that the IC 424 may be in any position regardless of the position of the connected device 448, particularly since the interconnect system 444,446 includes a mounted connector 446 on the housing 422 and connects the device 448 via coaxial cable. A skilled artisan recognizes as obvious that the coax is flexible and allows any flexure in order to adapt to positioning or repositioning of the IC 424 into any position. Regarding Claims 3 and 4, the interconnect system may include any number of poles in order to

connect to an external device. A skilled artisan would have found it obvious to include at least eight poles if four coaxial cables are employed in the external devices, and symmetry may be maintained in mounting of the connectors.

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael C. Wimer whose telephone number is (571) 272-1833. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Minsun O. Harvey can be reached on (571) 272-1835. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
